EDUCATION

Saint Joseph School, Addis Ababa | Stadium, A.A

May 2027

Stream: Natural Science(Grade 11) GPA: 3.6

Relevant Courses: Emerging Technologies(AI & AR,VR, Data Science, Web Development, Files & Databases

TECHNICAL SKILLS

Languages: Python, Html/CSS

Technologies/Tools: scikit-learn, NumPy, pandas, Streamlit

EXPERIENCE

Devtech Internship | Addis Ababa, Ethiopia

June 2025 - Aug. 2025

Machine Learning Intern

- Developed a **Linear Regression** machine learning model in **Python** using **scikit-learn** to predict house prices based on **3** key features: house area, number of rooms, and number of ages
- Collected, cleaned and analyzed a **Kaggle** house dataset(~**50** samples) using **pandas** and **NumPy**, preparing the data for model training and evaluation
- Achieved an **R² score of approximately 0.90**, demonstrating strong predictive performance on the dataset while gaining hands-on experience with the end-to-end machine learning workflow

ALX Wellness Hackathon | Addis Ababa, Ethiopia

June, 2026

Frontend Developer & Presenter

- Collaborated in a team to develop **VitalAI**, an AI- powered digital wellness platform during a hackathon
- Designed and implemented the **frontend interface**, creating an intuitive user experience for core features including wellness assessments and personalised health tracking

PROJECT

Ethiopian House Price Predictor | Python, Streamlit

April - June, 2026

- Built an end-to-end **machine learning system** to predict residential property prices across **19 Addis Ababa neighborhoods**, expanding the project from beginner prototype into a production-style prediction platform.
- Designed a **500-property dataset** with **14** engineered features reflecting realistic **2025-2026 Ethiopian real estate** conditions, incorporating location, property, characteristics, infrastructure access, and housing conditions
- Implemented and evaluated **4** regression models (**Linear Regression, Ridge Regression, Random Forest and Gradient Boosting**) using **cross-validation** and performance metrics including **R², MAE, and RMSE**, achieving a best **R² score of 0.968** with **Gradient Boosting**.
- Developed an interactive **Streamlit** web application that enables users to estimate their property values in **Ethiopian Birr(ETB)** based on custom housing characteristics and neighbourhood information.
- Authored an accompanying research paper, “**Comparing Machine Learning Models for Ethiopian Real Estate Price Prediction**,” analyzing model performance and demonstrating how geographic location, infrastructure proximity, property conditions and neighbourhood characteristics influence housing prices in Ethiopia.
